

Goals for Week 2/13-2/19

This week I need to

- 1) Re-train our binary and multiclass classification models using the raw data from Brazil with adjusted labels and new data from Ecuador
- 2) Do some research on the pricing of AWS S3 (for data storage) and EC2 (for GPU model training)

These goals are all part of completing story 2.1.1 (Theme is Image Classification and Object Detection; story is Image Classification). I will work on (1) independently, and work with Melody on (2).

The week is intense since I have two midterms, so I expect it to take about 6-8 hours on working independently and 1 hour for internal meeting. My plan is to finish (1) by Sunday, (if JY and Melody could finish cleaning up the data before Saturday), and (2) by Wednesday (and report it to Ryan on Wednesday).
